ABOUT THIS COURSE

What is Organic Chemistry Weekend?

Two intensive days on organic chemistry — the chemistry of carbon. Covers naming, functional groups, reaction mechanisms, and stereochemistry with a focus on pattern recognition over memorisation.

IS THIS RIGHT FOR YOU?

Who Should Enroll

✓ THIS IS FOR YOU IF...

- ✓ You're someone with foundational knowledge ready to go further in Chemistry
- ✓ You want to learn by doing — with projects, exercises, and live instruction rather than passive video-watching
- ✓ You value efficiency: you'd rather spend focused hours on the right material than months on self-directed study
- ✓ You want expert feedback and a structured environment to stay accountable

✗ THIS IS NOT FOR YOU IF...

- ✗ You don't yet meet the prerequisites: General chemistry basics (equivalent to 11th grade)
- ✗ You prefer entirely self-paced learning with no live component — this course includes scheduled live sessions
- ✗ You already have advanced expertise in this area and are looking for highly specialised material

Prerequisites: General chemistry basics (equivalent to 11th grade). Atomic structure & bonding.

Prasant connects chemistry to its real-world applications in every session — because memorising reactions without understanding the underlying principles is both tedious and fragile. Organic Chemistry Weekend is built on the insight that students who understand the "why" behind a reaction remember it without effort.

His teaching approach emphasises the connections between topics that textbooks often treat as separate — bonding theory, thermodynamics, and kinetics aren't isolated chapters, they're lenses on the same fundamental behaviour of matter.
