AI Demystified in 3 Hours

What AI actually is — and how it actually works. Strip away the hype and understand machine learning, neural networks, and LLMs with visual intuition and live demos.

PRICE	DURATION	LEVEL	FORMAT	SCHEDULE
₹499	3 Hours	Beginner	Live	1st Saturday, 2 PM

Prasant Mishra

Founder & Instructor, Qurious Academy

What is AI Demystified in 3 Hours?

The word "AI" is used so broadly and so loosely that most people — including many who work in tech — don't actually understand what it means or how it works. This session fixes that. In three hours, you'll develop a genuine, accurate understanding of how machine learning works, how neural networks learn, and specifically how the large language models (LLMs) like ChatGPT and Claude actually function under the hood.

Critically, this session doesn't require a maths degree or programming background. Everything is taught through visual intuition and live demonstrations first. The session is structured around the most common questions people have: What is a model? What does "training" actually mean? How does a neural network learn? Why do LLMs sometimes make things up? You'll leave with real answers to all of these.

The third hour moves from understanding to doing — you'll see a live demonstration of calling OpenAI and Anthropic APIs, understand how prompt engineering works, and leave knowing exactly how to start building with AI if you choose to.

IS THIS RIGHT FOR YOU?

Who Should Attend

✓ THIS IS FOR YOU IF...

- ✓ You use AI tools (ChatGPT, Copilot, etc.) but want to actually understand what's happening beneath the surface
- ✓ You're a professional, manager, or decision-maker who needs to speak intelligently about AI without having studied it
- ✓ You're curious about AI/ML as a career and want a clear, honest picture before investing in a longer program
- ✓ You have no coding or maths background but refuse to stay permanently confused about AI

✗ THIS IS NOT FOR YOU IF...

- ✗ You already understand how transformers and backpropagation work — this is an introductory session
- ✗ You want hands-on project building — see the "Build with AI" Weekend Cohort or the 12-Week AI & ML program instead
- ✗ You're looking for industry-specific AI applications (healthcare AI, finance AI) — this session covers foundations, not verticals

Prerequisites: Curiosity only. No maths, no coding, no prior AI knowledge required. If you can use a smartphone, you can follow this session.

What You'll Cover, Hour by Hour

HOOR 1

What Machines Actually Learn

- ▶ **What ML really is** — the crucial distinction between traditional programming (rules → output) and machine learning (data → rules); why this changed everything
- ▶ **Training, features & labels explained visually** — how a model learns from examples; what training data actually looks like and what the training process does
- ▶ **Linear models & decision boundaries** — the simplest ML model explained geometrically; classification, regression, and why simple models still matter
- ▶ **Why deep learning suddenly worked** — the historical context: what changed around 2012 that made neural networks practical, and why it matters

HOOR 2

Neural Networks & LLMs

- ▶ **How a neural network learns** — forward pass (making a prediction) and backward pass (learning from mistakes) explained through visual analogy, no calculus required
- ▶ **Backpropagation explained intuitively** — the algorithm behind every neural network; what it's doing conceptually and why it works
- ▶ **What a transformer actually does** — the architecture behind GPT, Claude, and every modern LLM; attention mechanisms explained in plain English
- ▶ **How GPT-4 and Claude work under the hood** — next-token prediction, context windows, temperature, and what it means for how you use these tools

HOOR 3

AI in Practice

- ▶ **Live: building with AI APIs** — a real-time demo of calling OpenAI and Anthropic APIs; you'll see exactly how developers build AI-powered applications
- ▶ **Prompt engineering principles** — what actually works and why: zero-shot vs. few-shot prompting, chain-of-thought, system prompts — with live examples
- ▶ **Where AI fails** — hallucinations, bias, knowledge cutoffs, reasoning limits; understanding these is essential for using AI responsibly and effectively
- ▶ **Roadmap: how to go deeper** — an honest map of the AI learning landscape; which path makes sense based on your goals and background

LEARNING OUTCOMES

What You'll Walk Away With

01 Explain how LLMs work to anyone
— not just "it predicts the next word" but a genuine mechanistic understanding you can explain clearly

02 Understand the real limits of current AI
— why models hallucinate, where they fail, and what that means for how much you can trust them

03 Use AI APIs to build something real
— the conceptual foundation for calling OpenAI/Anthropic APIs and building your own AI-powered tools

04 Know the right learning path to go deeper
— a personalised roadmap based on whether you want to use AI, build with it, or understand it at a research level

WHAT'S INCLUDED

Everything You Get

✓ **Full recording** — complete HD recording of the session shared within 24 hours

✓ **Curated resource list** — the best books, papers, courses, and tools for every level of further study

✓ **API demo code** — the complete code from the live API demo so you can run it yourself immediately

✓ **Learner's Certificate** — digital certificate of completion from Curious Academy

Schedule & Pricing

SCHEDULE

First Saturday of every month

TIME

2:00 PM IST

DURATION

3 hours (single session)

PRICE

₹499

Q Do I need a laptop or can I attend on my phone?

A laptop is recommended for the best experience, especially during the API demo portion. A phone will work for watching but you'll get more from it on a larger screen.

Q Do I need to set up any accounts beforehand?

We'll send a preparation email before the session with optional setup steps. Nothing is required — you can follow along by watching the live demos.

Q Is this session suitable for non-technical professionals?

Absolutely — it's specifically designed for them. Many attendees are managers, founders, and professionals who need to make informed decisions about AI.

About Prasant Mishra

Prasant Mishra

Founder & Instructor — Qurious Academy

GenAI Solutions Architect

15+ Yrs Teaching

2500+ Students

60+ Projects Delivered

As a GenAI Solutions Architect, Prasant has designed and shipped AI-powered systems at scale — which gives him a unique ability to explain AI not as an academic subject but as a living technology he works with daily. He understands exactly where the hype ends and the reality begins.

His teaching approach for AI is visual intuition first, technical precision second. He can explain a transformer architecture to a non-technical executive and to a machine learning engineer in the same session — because he understands it deeply enough to meet both where they are.

QuriousAcademy

Focused, live learning for curious minds. No fluff — just the concepts that matter.
