Python Weekend Intensive

Go from zero to building projects in a single weekend — two immersive days of live instruction, real projects, and immediate feedback.

PRICE	DURATION	LEVEL	FORMAT	SCHEDULE
₹2,999	2 Days · 16 hrs	Beginner	Live	Bi-weekly weekends

Prasant Mishra

Founder & Instructor, Qurious Academy

ABOUT THIS COURSE

What is the Python Weekend Intensive?

The Python Weekend Intensive is a two-day, 16-hour live cohort designed to take you from zero programming experience to building three real Python projects — all in a single weekend. No previous coding knowledge is assumed, and no prior preparation is required.

Unlike self-paced video courses where you're alone with a screen, this is a small-group live experience. You'll work alongside a cohort of peers, get immediate feedback after every exercise block, and have direct access to your instructor throughout. The format is structured around rapid cycles of explanation, hands-on coding, and review — the same rhythm used in the best bootcamps, compressed into a weekend.

By Saturday evening you'll have the foundations down. By Sunday afternoon you'll have built a data parser, a live weather CLI app, and a file automation script — all projects you can show to others and learn from. You'll also leave with a personalised roadmap for what to tackle next based on your goals.

IS THIS RIGHT FOR YOU?

Who Should Attend

✓ THIS IS FOR YOU IF...

- ✓ You're an absolute beginner who wants to go from zero to building real things — fast
- ✓ You've tried learning Python online but keep losing momentum with self-paced content
- ✓ You prefer learning in a live, interactive environment where you can ask questions
- ✓ You want to see concrete project output by the end of the weekend, not just concepts

✗ THIS IS NOT FOR YOU IF...

- ✗ You already know Python basics — consider the Python Mastery 90-Day program for deeper learning
- ✗ You can't commit fully to both days; the content builds sequentially and partial attendance means missing critical foundations
- ✗ You're looking for advanced topics like OOP in depth, databases, or web APIs — this is an entry-level cohort

Prerequisites: No programming experience needed. You'll need a laptop with Python installed — we provide a setup guide before the weekend.

Two Days, Four Blocks

DAY 1 — MORNING**Python Foundations**

- ▶ **Setup & environment** — installing Python, setting up VS Code, running your first line; we handle everyone's setup issues live
- ▶ **Variables, operators, data types** — how Python represents and manipulates information; int, float, string, bool in practice
- ▶ **Control flow & loops** — if/elif/else, for and while loops; building the logic backbone of any program
- ▶ **Functions & scope** — defining reusable code blocks, understanding how Python manages variable scope

DAY 1 — AFTERNOON**Data Structures + Project 1**

- ▶ **Lists, tuples, dicts, sets** — Python's four data containers with hands-on practice for each; when to reach for which
- ▶ **List comprehensions** — the Pythonic way to transform and filter collections in one clean expression
- ▶ **Nested data structures** — working with real-world data shapes: lists of dicts, dicts of lists
- ▶ **Project 1: Data parser & cleaner** — read a messy CSV, clean it up, and produce a structured output; your first real Python program

DAY 2 — MORNING**Intermediate Python**

- ▶ **Object-Oriented Programming** — classes, instances, methods, and inheritance; understanding the OOP mental model and when it's useful
- ▶ **File I/O & CSV handling** — reading, writing, and processing files; working with the csv module for structured data
- ▶ **Error handling & logging** — writing code that fails gracefully; try/except patterns and using the logging module for debugging
- ▶ **Modules, packages & pip** — how Python's import system works; installing and using third-party libraries

DAY 2 — AFTERNOON**Applied Projects + Roadmap**

- ▶ **Calling REST APIs** — making HTTP requests, parsing JSON responses, handling errors; the pattern behind every modern data integration
- ▶ **Project 2: Live weather CLI app** — build a command-line tool that fetches real weather data for any city using a free API
- ▶ **Project 3: File automation script** — build a script that organises files in a folder automatically; a taste of real-world automation
- ▶ **Code review & personal roadmap** — instructor reviews each project; you leave with a tailored plan for what to learn next based on your goals

LEARNING OUTCOMES

What You'll Walk Away With

01 Build and ship 3 complete Python projects

— not toy exercises but real programs that do useful things and demonstrate your ability to others

02 Understand OOP and write clean, readable code

— you'll know how to structure programs so they don't become a tangled mess as they grow

03 Work with real APIs and data

— fetch live data from the internet, parse JSON, and integrate external services into your programs

04 A personalised roadmap to continue

— a clear, honest next-steps plan based on your goals — whether that's data science, automation, web dev, or AI

WHAT'S INCLUDED

Everything You Get

✓ **Both day recordings** — full HD recordings of both sessions, shared within 24 hours

✓ **All project source code** — complete, clean, commented code for all three projects

✓ **Resource reading list** — curated follow-up resources for every direction you might want to continue

✓ **2 weeks of doubt support via WhatsApp** — ask questions and get answers from the instructor after the cohort ends

✓ **Learner's Certificate** — digital certificate of completion from Qurious Academy

LOGISTICS

Schedule & Pricing

SCHEDULE

Every other weekend (bi-weekly)

TIME

9:00 AM – 5:00 PM IST

DURATION

2 days · ~16 hours total

PRICE

₹2,999

❏ **What if I miss one of the days?**

The recording will be shared, but Day 2 builds directly on Day 1 content. We strongly recommend attending both live. If you miss Day 1, attending Day 2 live will be very difficult.

❏ **How many students are in a cohort?**

Maximum 20 students per cohort — small enough for the instructor to notice when you're lost and give you direct attention.

❏ **Is the post-cohort WhatsApp support included in the fee?**

Yes — 2 weeks of WhatsApp doubt support is included at no additional cost.

About Prasant Mishra

Prasant Mishra

Founder & Instructor — Qurious Academy

GenAI Solutions Architect

15+ Yrs Teaching

2500+ Students

60+ Projects Delivered

Prasant brings deep expertise across Mathematics, Physics, Programming, Systems Design, and GenAI Architecture. With over 15 years of teaching experience and 2,500+ students taught, he has a rare ability to take complex technical subjects and make them genuinely clear — without dumbing them down. He founded Qurious Academy to make rigorous, live learning accessible to every curious mind in India.

His teaching philosophy: every concept can be explained clearly. If something is confusing, the explanation hasn't been found yet. He brings that relentless clarity — and a love of seeing students have "aha" moments — to every cohort.

QuriousAcademy

Focused, live learning for curious minds. No fluff — just the concepts that matter.
