Python in 3 Hours

The essential 20% that does 80% of the work — a rapid, high-signal session covering the Python concepts that actually matter in practice.

PRICE	DURATION	LEVEL	FORMAT	SCHEDULE
₹499	3 Hours	Beginner	Live	1st Saturday, 10 AM

Prasant Mishra

Founder & Instructor, Qurious Academy

ABOUT THIS COURSE

What is Python in 3 Hours?

Most Python tutorials either drown you in theory or turn into a 40-hour slog through every edge case imaginable. This masterclass does neither. In one focused three-hour live session, you'll learn the specific Python concepts that come up again and again in real work — the 20% of the language that handles 80% of practical tasks.

This is not a survey course. Every minute is earned. You'll write actual Python — in the REPL and in scripts — from the first hour. By the end, you'll know how to read and write data, call external APIs, automate repetitive tasks, and most importantly: you'll understand *why* the code works, not just that it does. You leave with a clear, honest picture of where to go next.

The session is taught live, so you can ask questions in real time. All code from the session is shared afterwards, along with a recording and a curated resource list for your next steps.

IS THIS RIGHT FOR YOU?

Who Should Attend

✓ THIS IS FOR YOU IF...

- ✓ You've heard about Python and want to know if it's worth learning — without committing to a 30-hour course first
- ✓ You work in a non-technical field (finance, marketing, operations) and want to automate repetitive tasks
- ✓ You've dabbled before but never gotten to the point of writing something useful
- ✓ You want a fast, honest orientation to the language before deciding what to learn next

✗ THIS IS NOT FOR YOU IF...

- ✗ You already write Python regularly — this is a beginner session and you'll find it too basic
- ✗ You're looking for a comprehensive course with projects, assignments, and ongoing mentorship — see the Python Weekend Intensive or 90-Day Mastery program instead
- ✗ You want deep dives into OOP, databases, or web frameworks — this session focuses on core fundamentals only

Prerequisites: None — just a laptop with Python installed (we'll guide you through setup in the first 10 minutes if needed) and a genuine curiosity about programming.

What You'll Cover, Hour by Hour

HOOR 1

The Python Mental Model

- ▶ **Variables & data types** — how Python stores and thinks about information; integers, floats, strings, booleans and why the distinction matters
- ▶ **Control flow** — if/elif/else, for loops and while loops; the building blocks of any program's logic
- ▶ **Functions & scope** — packaging reusable logic, understanding local vs. global variables, and writing clean modular code from day one
- ▶ **The REPL & running scripts** — using Python interactively to experiment, then writing and running your first .py file from the terminal

HOOR 2

Working with Data

- ▶ **Lists, dicts, sets, tuples** — Python's four core data containers, when to use each, and how to navigate between them
- ▶ **List comprehensions** — the Pythonic way to transform and filter data in a single readable line
- ▶ **File I/O** — reading from and writing to text files and CSVs; the foundation of every data pipeline
- ▶ **Error handling with try/except** — writing code that doesn't crash unexpectedly and gives you meaningful error messages

HOOR 3

Real-World Python

- ▶ **Installing & using libraries with pip** — Python's superpower is its ecosystem; learn to find, install, and use third-party packages in minutes
- ▶ **Calling a JSON REST API** — live demo fetching real data from the internet using the requests library; the pattern behind every integration
- ▶ **Writing a mini automation script** — putting everything together into a script that does something genuinely useful
- ▶ **Where to go next** — an honest roadmap: data science, web dev, automation, AI — what each path requires and how to choose

LEARNING OUTCOMES

What You'll Walk Away With

01 Write Python scripts confidently
— not just copy-paste code but understand what each line does and why, so you can adapt it to your own problems

02 Understand how data flows through a program
— the mental model for thinking about variables, functions, and data structures that every Python developer uses

03 Use third-party libraries
— install any package from PyPI and get up and running with it quickly, without needing a tutorial for every new tool

04 Know exactly what to learn next
— a clear, personalised roadmap so you don't waste weeks on the wrong things after this session

WHAT'S INCLUDED

Everything You Get

✓ **Session recording** — full HD recording shared within 24 hours; rewatch any part at your own pace

✓ **All code files** — every script written during the session, clean and commented

✓ **Python cheat sheet PDF** — a single-page reference covering syntax, built-ins, and common patterns

✓ **Curated next-steps resource list** — hand-picked books, courses, and practice sites for every direction you might want to go

✓ **Learner's Certificate** — digital certificate of completion from Qurious Academy

LOGISTICS

Schedule & Pricing

SCHEDULE

First Saturday of every month

TIME

10:00 AM IST

DURATION

3 hours (single session)

PRICE

❖ **What if I miss the live session?**

The full recording is shared within 24 hours — you won't miss any content. However, the live session is the best experience because you can ask questions in real time.

❖ **Is there support after the session?**

You'll receive a curated resource list and can reach us at hello@curiousacademy.com for any follow-up questions. For ongoing mentorship, consider the Python Weekend Intensive or 90-Day program.

❖ **What platform is the session on?**

The live session is conducted on Zoom. You'll receive the link via email after enrollment.

About Prasant Mishra

Prasant Mishra

Founder & Instructor — Qurious Academy

GenAI Solutions Architect

15+ Yrs Teaching

2500+ Students

60+ Projects Delivered

Prasant brings deep expertise across Mathematics, Physics, Programming, Systems Design, and GenAI Architecture. With over 15 years of teaching experience and 2,500+ students taught, he has a rare ability to take complex technical subjects and make them genuinely clear — without dumbing them down. He has built AI-powered systems at scale and founded Qurious Academy to make rigorous, live learning accessible to every curious mind in India.

His teaching philosophy: every concept can be explained clearly. If something is confusing, the explanation hasn't been found yet. He brings that relentless clarity to every session.

QuriousAcademy

Focused, live learning for curious minds. No fluff — just the concepts that matter.
