What is Python Mastery — 90 Days?

Python Mastery is a comprehensive 90-day program built for people who want to go beyond tutorials and become genuinely job-ready. It's not a collection of videos — it's a structured learning experience with live sessions every weekend, weekly graded assignments, personal code reviews, and a capstone project you'll build from scratch and can add to your portfolio.

The program is designed around three months, each with a clear theme: Month 1 builds your core Python foundation deep enough to write professional code. Month 2 puts that foundation to work on real problems — APIs, databases, data analysis, automation. Month 3 goes professional: algorithms, version control, web APIs with FastAPI, Docker, and deployment — ending with a capstone project that demonstrates everything you've learned.

This is the program for you if you're serious. It asks for 8–10 hours per week. The people who get the most from it are those who show up to every session, do every assignment, and treat the code reviews as the learning opportunity they are. By Day 90 you'll have a portfolio, a network of peers, and the ability to walk into a junior Python developer interview with genuine confidence.

IS THIS RIGHT FOR YOU?

Who Should Enroll

✓ THIS IS FOR YOU IF...

- ✓ You're starting from zero or near-zero and want to reach a professional level in Python within 3 months
- ✓ You want structured accountability — assignments, code reviews, and a cohort — not just videos
- ✓ Your goal is to get a job as a Python developer, transition into data science, or build your own projects professionally
- ✓ You can consistently commit 8–10 hours per week for 90 days

✗ THIS IS NOT FOR YOU IF...

- ✗ You're already an intermediate/senior Python developer — the first month will be review for you
- ✗ You can only commit a few hours per week — this program requires sustained effort; part-time engagement leads to poor outcomes
- ✗ You want a quick intro — consider the 3-Hour Masterclass or Weekend Intensive first

Prerequisites: None in terms of Python knowledge — but a genuine commitment to 8–10 hours per week is essential. A working laptop and stable internet connection required.

Three Months, Three Phases

MONTH 1

Core Python

- **Python fundamentals in depth** — variables, types, control flow, functions, scope — at a pace that builds real understanding, not surface familiarity
- **Data structures & algorithms basics** — lists, dicts, sets, and the algorithmic thinking needed to use them well
- **Functions, decorators & closures** — advanced function features that professional Python code relies on; understanding Python's functional programming side
- **OOP — classes, inheritance, dunder methods** — object-oriented programming done right; when to use classes and how to design them cleanly
- **Exception handling & logging** — writing code that handles failure gracefully and produces meaningful diagnostic information
- **Unit testing with pytest** — writing tests from day one; the habit that separates professional code from hobbyist code

MONTH 2

Applied Python

- **File & database I/O (SQLite)** — working with files, CSVs, and a real relational database; CRUD operations with Python's sqlite3 module
- **REST APIs & web scraping** — calling APIs with requests, parsing responses, and extracting data from web pages with BeautifulSoup
- **Data analysis with Pandas & NumPy** — loading, cleaning, transforming, and analysing real datasets; the foundation of data science in Python
- **Automation scripts (OS, scheduling)** — automating file operations, scheduling tasks with cron, building tools that run without you
- **Virtual environments & packaging** — managing dependencies professionally; creating installable packages
- **Type hints & mypy** — adding static type annotations to catch bugs before runtime; modern Python best practices

MONTH 3

Professional Python

- **Algorithm design & complexity** — Big-O notation, common algorithm patterns, and how to reason about the performance of your code
- **Git & version control** — collaborative workflows with GitHub; branching, pull requests, code review as practiced in real teams
- **Web APIs with FastAPI** — building production-quality REST APIs with Python's fastest modern framework; authentication, validation, docs
- **Docker basics & deployment** — containerising your applications and deploying them to the cloud; the complete path from local to live
- **Capstone project** — build and ship a real project of your choice; mentored sprint with code reviews and a final demo

- ▶ **Portfolio review & interview prep** — preparing your GitHub, resume, and ability to discuss your projects; mock interview practice

LEARNING OUTCOMES

What You'll Walk Away With

01 Write production-quality, tested Python code

— not just working code, but clean, typed, tested code that other developers can understand and maintain

02 Build and deploy REST APIs with FastAPI

— design, build, and deploy a production-quality web API that other applications can consume

03 Analyse data with Pandas

— load, clean, transform, and draw insights from real datasets; the core skill behind data science roles

04 Ship a real capstone project

— a deployed, live application on your GitHub and resume that demonstrates the full breadth of what you've learned

05 Be interview-ready for junior Python roles

— technical knowledge, portfolio, and communication skills to pass screens at product companies

WHAT'S INCLUDED

Everything You Get

✓ **Weekly live sessions** — 2 hours each, every Saturday and Sunday for 12 weeks

✓ **All session recordings** — every session recorded and available to rewatch

✓ **Weekly graded assignments** — real coding problems with model answers; the only way to build fluency is to write code

✓ **1-on-1 code review every 2 weeks** — personal feedback on your code from the instructor; the fastest way to improve

✓ **Weekly group doubt session** — 1 hour each week to ask questions and see other students' questions answered

✓ **Capstone project mentorship** — dedicated support for your Month 3 capstone project from ideation to deployment

✓ **Learner's Certificate** — digital certificate of completion from Quirious Academy

✓ **Alumni community access** — lifetime access to the alumni network; job leads, project collaborations, and peer support

Schedule & Pricing

LIVE SESSIONS**Saturdays & Sundays · 10 AM–12 PM IST****DURATION****90 days (12 weeks)****WEEKLY COMMITMENT****8–10 hours per week****PRICE****₹7,999****Q What happens if I fall behind on assignments?**

We track assignment completion and reach out proactively if we see you falling behind. Catch-up is possible but we recommend staying current — the content is cumulative.

Q Can I access content after the 90 days?

Yes — all recordings and materials remain accessible to you permanently. The alumni community also stays open.

Q Is there a refund policy?

We offer a full refund within the first 7 days if you decide the program isn't right for you. Contact hello@quriousacademy.com.

About Prasant Mishra

Prasant Mishra

Founder & Instructor — Qurious Academy

GenAI Solutions Architect

15+ Yrs Teaching

2500+ Students

60+ Projects Delivered

Prasant has built production Python systems across industries — from data pipelines to AI-powered APIs to automation tools at scale. He brings that real-world experience directly into the classroom, teaching the patterns and practices that actually matter in professional environments, not just what passes academic tests.

With 15+ years of teaching experience and a track record of helping students land their first developer roles, he understands exactly where learners get stuck and how to unstick them. The 90-Day program reflects his belief that depth, accountability, and real projects are the only path to genuine competence.

QuriousAcademy

Focused, live learning for curious minds. No fluff — just the concepts that matter.
