ABOUT THIS COURSE

What is Build Your First Website — 3 Weeks?

This sprint is built around one goal: by the end of Week 3, you have a real, deployed personal portfolio website live on the internet with your own domain (or a free subdomain) that you built yourself from scratch. Not a template. Not a drag-and-drop builder. Actual HTML, CSS, and JavaScript — code you understand and can modify.

The sprint meets three evenings a week for three weeks — Monday, Wednesday, and Friday at 7 PM IST. Each 90-minute session teaches you what you need and immediately applies it to the project. Week 1 covers HTML structure and CSS styling — by Friday you have a styled personal bio page. Week 2 adds JavaScript — by Friday you have a dynamic page that fetches data and responds to user interaction. Week 3 assembles everything into a complete portfolio and deploys it live with GitHub and Vercel.

All sessions are recorded so you can rewatch anything you missed or found difficult. The format is deliberately conversational — small group, questions encouraged, code reviewed live. You build something real every single session — no toy exercises, no "hello world" that goes nowhere.

IS THIS RIGHT FOR YOU?

Who Should Attend

✓ THIS IS FOR YOU IF...

- ✓ You're a complete beginner who wants to build a real website — not a drag-and-drop template but actual code you own and understand
- ✓ You're a student, freelancer, or professional who wants a portfolio website to showcase your work online
- ✓ You can commit three evenings a week for three weeks — the sprint format requires showing up regularly
- ✓ You want to understand the foundations before learning React, Next.js, or any modern framework

✗ THIS IS NOT FOR YOU IF...

- ✗ You already know HTML, CSS, and JavaScript — see the React Foundations sprint for the next level
- ✗ You can't commit to the live schedule — while recordings are provided, the sprint is designed for live participation and you'll get much less from recordings-only attendance
- ✗ You want a dynamic web app with a backend, database, or user accounts — this sprint covers the front end only

Prerequisites: None — absolute beginners are welcome. You need a laptop, a text editor (we recommend VS Code, free to install), and a stable internet connection.

Three Weeks, Six Sessions, One Real Project

WEEK 1**HTML & CSS**

- ▶ **HTML document structure & semantic elements** — how a webpage is structured; headings, paragraphs, links, images, lists, and semantic tags (header, main, section, footer) and why they matter for accessibility and SEO
- ▶ **CSS selectors, box model, typography** — how CSS targets elements, the box model (margin, border, padding, content) as the foundation of every layout, and typography that actually looks good
- ▶ **Flexbox & Grid — responsive layouts** — the two modern CSS layout systems that replaced years of float hacks; building layouts that work on any screen size
- ▶ **Your first page: personal bio** — by end of Week 1 you have a styled, responsive personal bio page that looks professional and works on mobile

WEEK 2**JavaScript**

- ▶ **Variables, functions, events** — JavaScript fundamentals; how the language handles data, how to write reusable logic, and how to respond to user actions (clicks, typing, hovering)
- ▶ **DOM manipulation — changing the page live** — using JavaScript to modify HTML and CSS dynamically; selecting elements, changing content and styles, adding and removing elements
- ▶ **Fetch API — pulling data from the internet** — making HTTP requests in JavaScript; parsing JSON responses; displaying live data on your page (GitHub profile, weather, etc.)
- ▶ **Project: dynamic portfolio page** — by end of Week 2 your portfolio page fetches your GitHub repositories and displays them dynamically, updating automatically without page refresh

WEEK 3**Build & Deploy**

- ▶ **Project: complete personal portfolio site** — adding a projects section, contact form, navigation, and polishing every detail; a site you'd actually share with potential employers or clients
- ▶ **GitHub — version control basics** — creating a repository, committing changes, pushing to GitHub; the workflow every developer uses and the foundation for all future collaboration
- ▶ **Deploy live with Vercel (free tier)** — connecting your GitHub repository to Vercel; your site goes live at a real URL in under 5 minutes; automatic re-deployment on every push
- ▶ **Code review & next steps** — instructor reviews your deployed site and gives specific, actionable feedback; a clear next-steps plan for continuing into React or backend development

LEARNING OUTCOMES

What You'll Walk Away With

01 A live, deployed personal website
— your own portfolio site at a real URL, built from scratch, that you can share with anyone and continue to improve

02 HTML, CSS, and JavaScript fundamentals
— the foundations that every web framework (React, Vue, Angular) is built on; no shortcuts taken

03 Git and Vercel deployment workflow
— version control basics and the modern deployment pipeline used by professional developers

04 A clear next-steps roadmap
— exactly what to learn next (React, Node.js, etc.) based on your goals, with specific resource recommendations

WHAT'S INCLUDED

Everything You Get

✓ **6 live sessions** — 90 minutes each, Mon/Wed/Fri evenings for 3 weeks

✓ **All recordings** — every session recorded and available to rewatch at any time

✓ **Starter project files** — HTML/CSS/JS starter templates for each week so you start each session from a clean baseline

✓ **Learner's Certificate** — digital certificate of completion from Qurious Academy

LOGISTICS

Schedule & Pricing

LIVE DAYS

Monday, Wednesday, Friday

TIME

7:00 PM – 8:30 PM IST

DURATION

3 weeks · 6 sessions · 9 hrs

PRICE

₹1,999

Q When does the next batch start?

Batches start on a rolling basis — check curiousacademy.com/courses for the next available start date. New batches begin regularly.

Q What if I miss a session?

The recording is available within a few hours. The sprint is designed to be followed in sequence — missing a session means watching the recording before the next live session to stay current.

Q Do I need to buy hosting or a domain?

No — Vercel's free tier is sufficient for your portfolio site. You'll get a free subdomain (yourname.vercel.app). Custom domain purchase is optional and costs ~₹500–800/year from any domain registrar.

About Prasant Mishra

Prasant Mishra

Founder & Instructor — Qurious Academy

GenAI Solutions Architect

15+ Yrs Teaching

2500+ Students

60+ Projects Delivered

Prasant has built web applications as part of 60+ projects delivered across his career as a solutions architect. He knows what beginner developers most commonly misunderstand — and exactly where to spend teaching time to prevent those misconceptions from forming in the first place.

His teaching approach for web development: you understand something in web dev when you can predict what your browser will do before you save the file. Every session is designed to develop that predictive intuition.

QuriousAcademy

Focused, live learning for curious minds. No fluff — just the concepts that matter.
