Prasant has taught Python to over 2,500 students — from fresh graduates learning their first programming language to senior professionals automating workflows they once thought required a dedicated developer. Core Python reflects what he's found to be the fastest path from zero to genuine productivity.

His teaching philosophy is rooted in the belief that syntax is the easy part — the hard part is building a programmer's intuition for breaking problems down. Every session is designed to give you both the language and the mental model.
